

STORAGE

The packaging provided with the footwear at the point of sale is designed to ensure that the footwear is delivered to the customer in the same condition as it left the manufacturer. The packaging can also be used to store the footwear when not in use. Do not place any heavy objects on the packaging when the footwear is inside as this could cause the packaging to collapse and damage the footwear.

- The footwear must be stored at a normal temperature and humidity. The estimated lifetime is as follows:
 - 10 years from date of manufacture for footwear with a rubber sole and leather upper.
 - 3 years from the date of manufacture for shoes with polyurethane.
- How long the shoes will actually last depends on environmental factors, contamination and wear.
